

Instructions To Run The Website

Required version of python : 3.10.2

Required version of Node.js : 16.14.2

1. Install Node.js
2. Install yarn using npm (Which comes bundled with Node.js) using the following command in terminal for windows
`npm install --global yarn`
For ubuntu, you will have to give the superuser access-
`sudo npm install --global yarn`
3. Move into the “frontend” folder and in the terminal run
`yarn install`
4. Move into the “backend” folder and in the terminal run
`pip install -r requirements.txt`
`Pip install django-cors-headers`
5. For creating Admin type the following commands (in the “backend” folder) in terminal :
`python manage.py makemigrations`
`python manage.py migrate --run-syncdb`
`python manage.py createsuperuser`

This will ask for email ID and password which will be used to login as admin in the website

6. In the “backend” folder run the following command in the terminal :
`python manage.py runserver`

After running the above command the backend will start running

7. In the “frontend” folder run the following command in a separate terminal.
`yarn start`

After running the above command the website will start running
